#############################################################
# I encourage you to download 'fdemo1.f', compile it,
# and run it INTERACTIVELY yourself.  You should see
# output essentially identical to that shown below.
# Note, however, that both because I'm lazy, as well
# as to illustrate the use of I/O re-direction, I have
# previously prepared a file called 'INPUT', which
# contains many lines consisting of a single character
# These lines will be read by the 'prompt' subroutine
# which, when run interactively, writes a prompt to
# stdout and then waits for input from stdin.
